

**JVCKENWOOD Public Industry System (JKPI) signs a sponsorship agreement with top-level Japan American Football X League team "IBM BigBlue" to provide a simultaneous call intercom system for use during practice and games.**

Through this sponsorship agreement, JKPI will provide IBM BigBlue with a communications system based on KENWOOD's "WD-D10 Series" (ProTalk FD - WD-K10 Series in Europe) Wireless Intercom System to provide instant communication between coach and training staff. American football has evolved into a highly strategic game where team coaches analyse the effectiveness of strategies in play from the stand and the information transmitted via the trainers to team members in the field. The KENWOOD ProTalk FD is ideally suited to this application as it allows simultaneous communications between a number of people to take place at the same time, while its compact, lightweight design and excellent water and dustproof performance ensures reliability in harsh outdoor environments.

**ProTalk<sup>FD</sup>**

About "ProTalk FD - Licence-Free DECT Wireless Intercom Systems"

The WD-K10 Series is KENWOOD's DECT intercom system for small groups, offering hands-free, simultaneous two-way communications.

It can significantly ease day-to-day operations with staff contact & coordination anytime, anywhere - indoors or outdoors.
